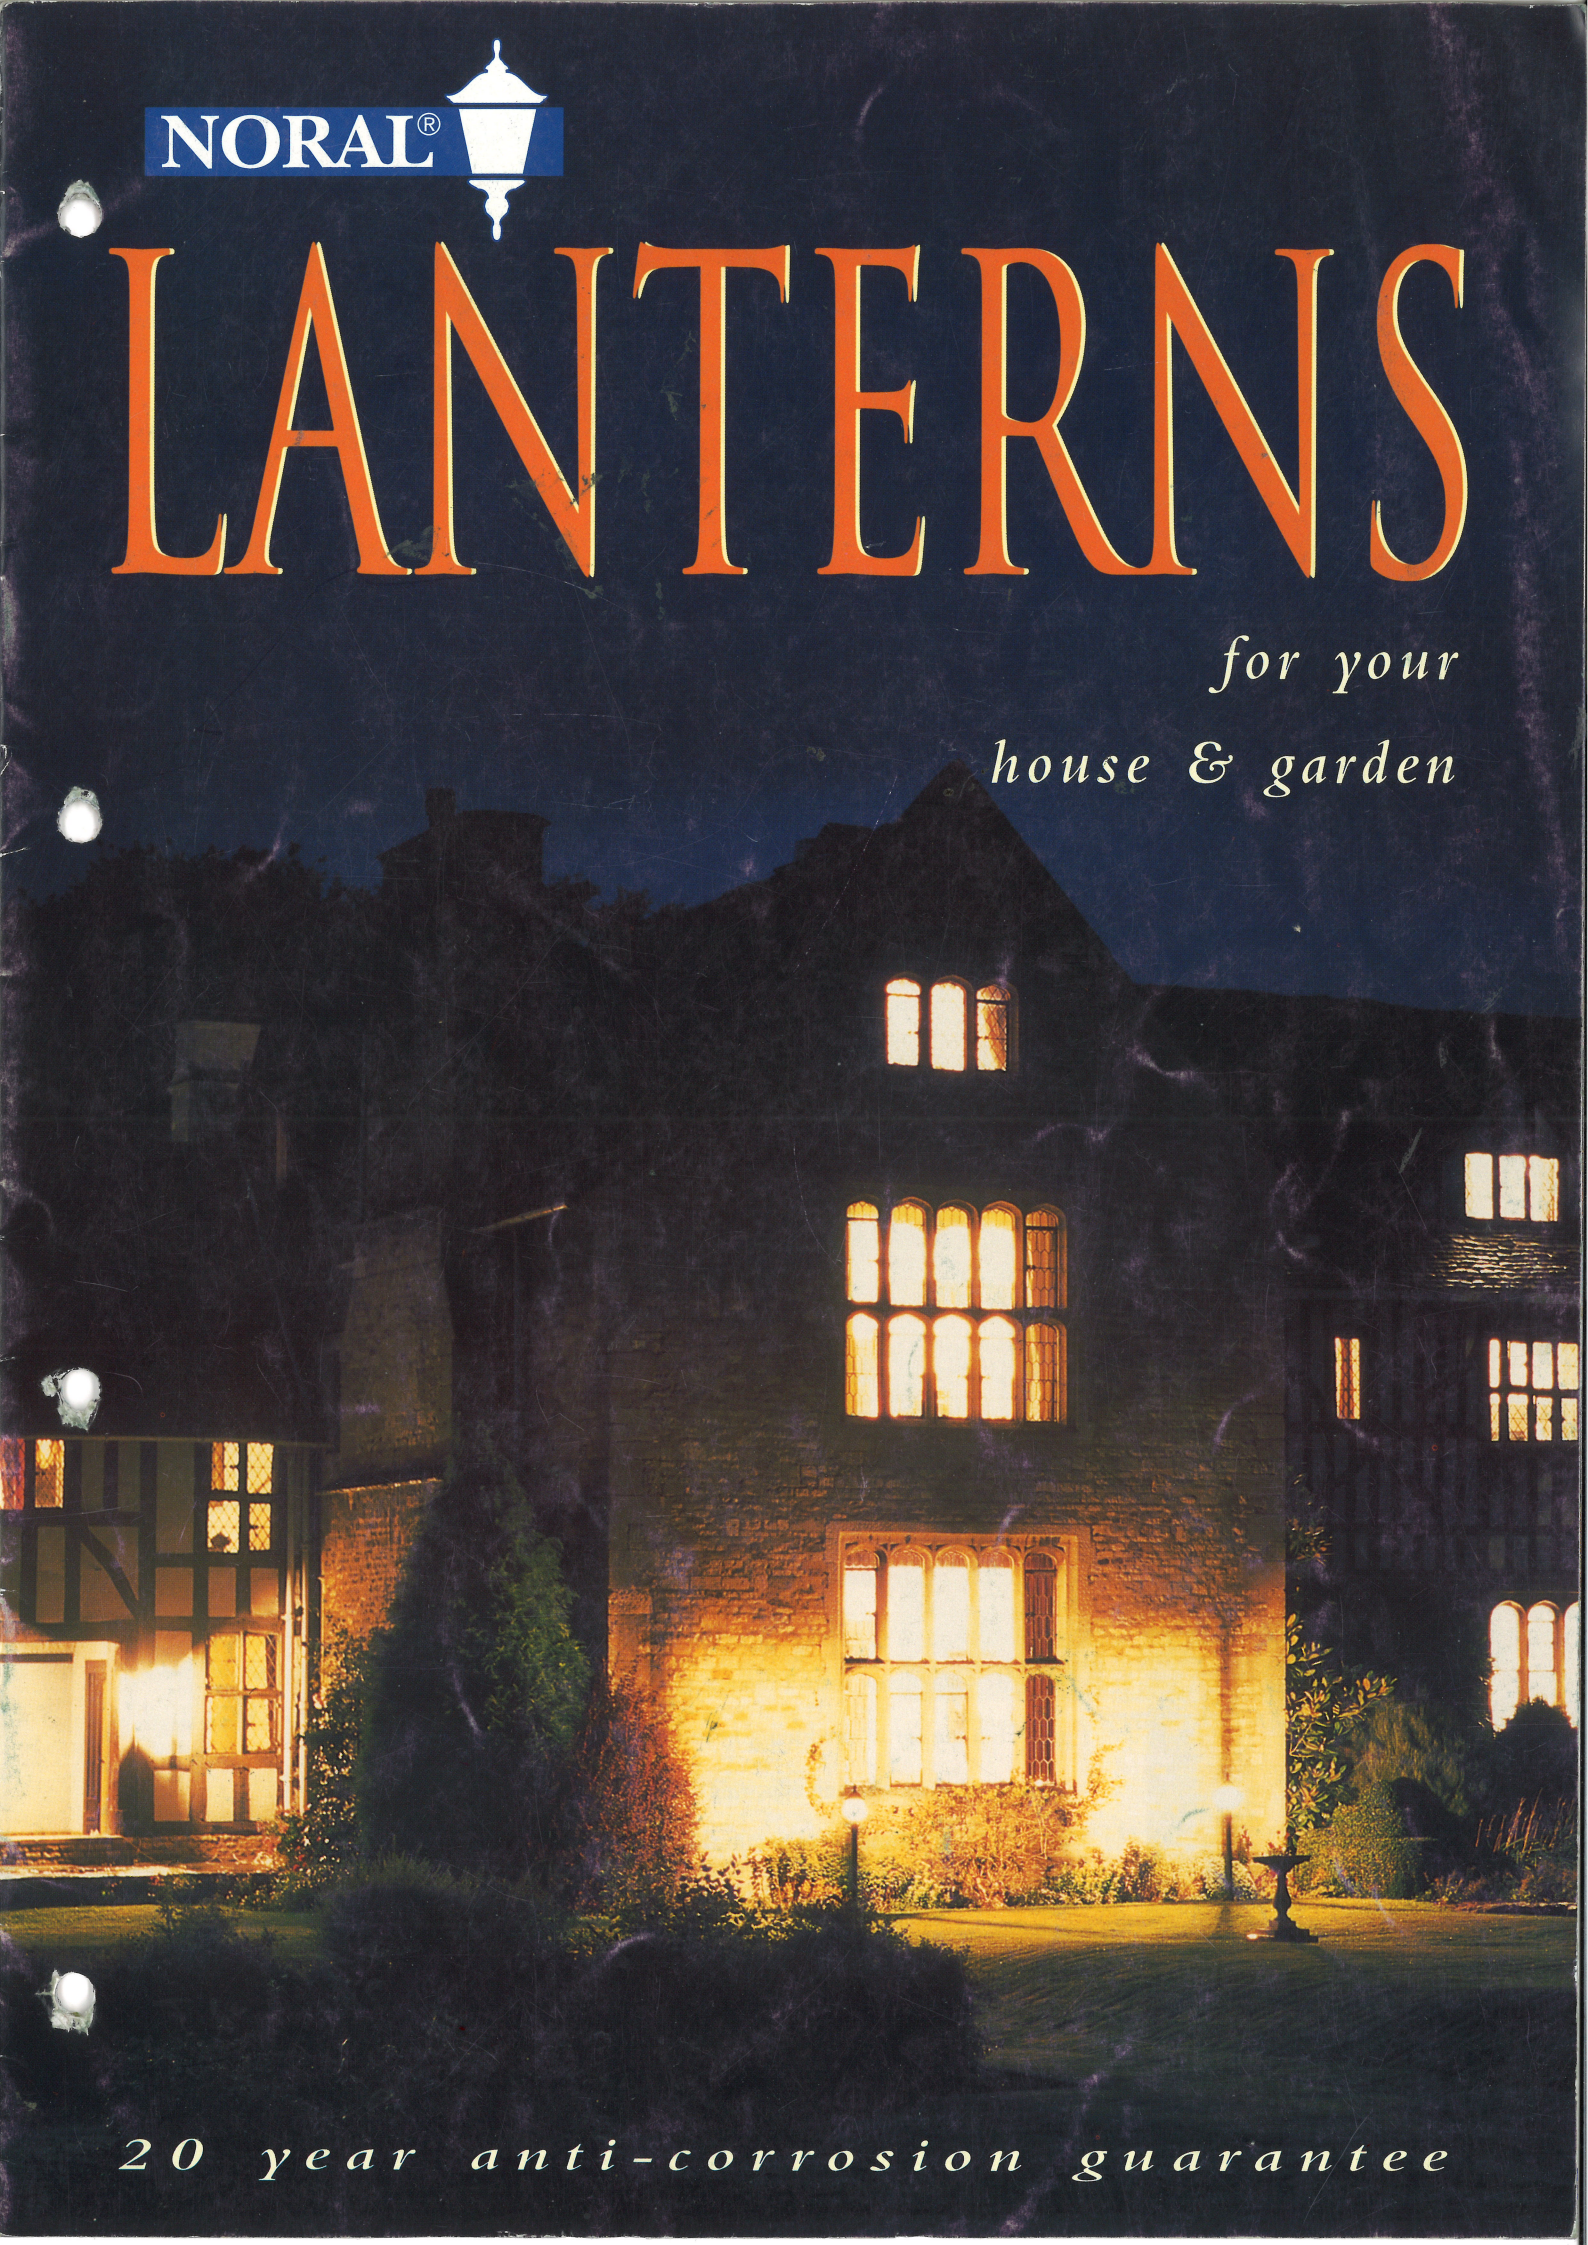
NORAL®

LANTERNS

for your house & garden



20 year anti-corrosion guarantee

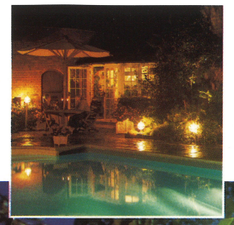
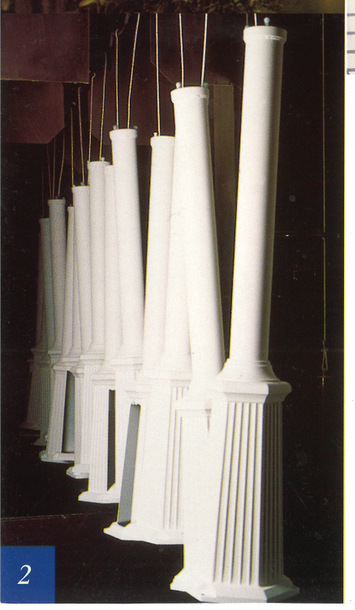
the Quality of



Noral is today recognised as the world's leading manufacturer of Decorative Exterior Lighting.



Founded in Norway over 25 years ago, Noral has perfected the art of producing beautiful lantern designs that can be seen adorning many of the world's most famous architectural landmarks. The quality of manufacture and fine attention to detail continue with the beautiful ranges of lanterns designed especially for your home and garden.

NORAL

This unique range is exclusively distributed nationwide by Hampshire based Elstead Lighting, one of the countries leading lighting suppliers with a major retailing and servicing network.

The Scandinavian flair for style and their reputation for quality is apparent in every design. Noral is an ISO 9001 quality assured and accredited company and all products are supplied with CE mark and are certified to BS EN60-598.

Black White Aged Copper Aged Bronze

Each Noral product is crafted from 99.5% pure, recycled aluminium and is carefully chrome treated prior to being polyester powder coated. Noral offers its range in a choice of four tasteful finishes. Each lens is moulded in one piece from a vandal resistant polycarbonate and is lightly smoked for that perfect finishing touch.

20 year anti-corrosion GUARANTEE

To further endorse the quality of the product, Noral offers a full 20 year anti-corrosion guarantee. Outdoor fittings have to withstand all weather extremes from sub-zero temperatures, rain, snow, wind and burning sun. In coastal regions there is also the additional factor of salt-spray from the sea.

A range of superior outdoor lanterns which will immediately create a feeling of elegance and style around your home by day and bring alive your entrance and gardens in the evening. All have a 'family' of fitting options and colours and are simple to install.

An illuminating on garden lighting

Effective lighting will complement your home and garden 24 hours a day. The first impression of any home is obviously its entrance. During the day an elegant lampost with matching wall lamps will create an affluent, stylish welcome. At night, the same lights will provide illumination, security and a warm glow.

The garden is a treasure chest of lighting design opportunities - really showing off its best features. And why stick to outside for these terrific lighting products. Conservatories, summer-houses, porches, all offer endless interesting variations for lighting techniques.

It's a fascinating area for design, it all depends on your own interpretation of the atmosphere you are looking to create. Clean, crisp white fittings can be used to rediscover the Mediterranean coastline, whilst traditional black lanterns will endorse luxury and good living.

Enthusiastic gardeners spend a fortune on plants, shrubs and features, which by dusk are hidden until dawn. The effects of garden lighting should not be restricted to an occasional wall mounted carriage lamp or a security floodlight. The opportunity to enjoy the fruits of your labour's in the garden should be a priority this year.
A carefully placed pedestal lantern can bring alive a path, pond or special feature.
Domestic lamp-posts in the garden are most attractive in the daytime - and with a choice of 1or 2 lantern heads, the illumination at night will totally transform a lawn, rockery or patio.

perspective

With a small investment and a little imagination your garden can come alive at night significantly extending your time outdoors.

To complete the design of a garden you could include post mounted lanterns to ensure every corner of the garden is illuminated. Place the posts at intervals in relationship to the size of the garden.
Pedestal lanterns can be added for wall tops and gated entrances.

As a guide, the distance between the lanterns should be no more than 4 times their height from the ground. Lanterns should be ideally installed before any re-planting to allow cables to be suitably laid.

Browse through the ten lantern ranges in this brochure and see how Noral can help you create your dream garden environment.

Vaasa

The Vaasa is a tasteful, dainty individual, but don't be fooled by those delicate looks, Vaasa is just as tough, just as weather resistant as every Noral product.

The Vaasa loves a court-yard wall, a terraced facade or a country garden, a setting where a bolder character might look ostentatious. Vaasa will provide a high level of illumination but create a friendly atmosphere. Equally at home in town or country home. Vaasa recalls a more leisurely age.

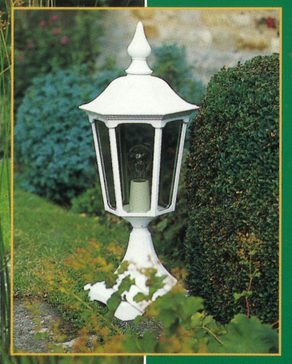
NORAL®

STAVANGER

The Stavanger exudes dignity. A timeless classic, a family which echoes an age gone by. Stavanger is however, a robust design, in a class of its own, looking just as elegant in white, black or aged finishes.

The Stavanger will withstand the test of time. It lends 'old world' charm to the generously curved lines which fit in easily to any contemporary setting.



The Noral lantern Stavanger comes with a variety of light options.
High Pressure Sodium is a warm yellow light which is highly efficient, ideal for areas which need to be lit throughout the night. One unit can provide more light than 5x100 watt lamps combined.
High Pressure Mercury is a cool white light which is efficient and functional. Ideal for paved areas and pathways that need to be constantly lit.

NORAL®

The Risa Mini is the best selling wall lantern Noral has ever produced.

It will fit in anywhere, particularly where space is limited, and because of it's compact size will look smart in a series around a building. The smoked lens provides a very attractive effect.
